

Sample Paragraph Document

Paragraph 1

Artificial Intelligence has rapidly transformed modern technology and communication. From virtual assistants to recommendation systems, AI-powered applications are now deeply integrated into daily life. Many educational institutions are also exploring AI tools for personalized learning experiences and automated evaluation systems.

Paragraph 2

The growth of digital education has increased the need for intelligent content analysis tools. Teachers and institutions often struggle to identify whether assignments are genuinely written by students or generated using large language models. This challenge has encouraged researchers to build systems capable of detecting writing patterns and estimating AI-generated probabilities.

Paragraph 3

Human-written content usually contains emotional variation, inconsistent sentence lengths, and unique personal writing habits. In contrast, AI-generated writing often appears highly polished, grammatically balanced, and structurally uniform. However, AI detection is not perfectly accurate, which is why probability-based scoring is considered more reliable than absolute claims.

Paragraph 4

Optical Character Recognition, commonly known as OCR, allows computers to extract readable text from image files. OCR technology is especially useful when users upload scanned documents or screenshots instead of editable PDFs. Modern OCR libraries use machine learning techniques to improve character recognition accuracy across different languages and fonts.

Paragraph 5

FastAPI has become a popular framework for machine learning projects because of its speed, simplicity, and asynchronous processing support. Combined with React and Tailwind CSS, developers can build responsive and scalable web applications that provide real-time analysis and interactive dashboards.
